Bacteriol. 183:3293-3302(2001).

J. Bacteriol. 183:3293-3302(2001).

-I- FUNCTION: Oxidizes hypoxanthine and xanthine to uric acid.
-I- CATALYTIC ACTIVITY: Xanthine + NAD(+) + H(2)O = urate + NADH.
-I- COPACTOR: Molybdopterin (By similarity).

PATHWAY: Arginine biosynthesis; fifth step.

PATHWAY: Arginine biosynthesis; fifth step.

SUBUNIT: Heterotetramer of two alpha and two beta chains () similarity).

SUBCELLULAR LOCATION: Cytoplasmic (Probable).

MISCELLANEOUS: Some bacteria possess a monofunctional argJ-manla of catalyzing only the fifth step of the arginine
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         CATALYTIC ACTIVITY: N(2)-acetyl-L-ornithine + L-glutamate = ornithine + N-acetyl-L-glutamate.
CATALYTIC ACTIVITY: Acetyl-CoA + L-glutamate = CoA + N-acety
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      capable of catalyzing only biosynthetic pathway. CONSTITUTIVE SECRETORY PATHWAY, WITH UNIQUE RESTRICTED
CONSTITUTIVE SECRETORY PATHWAY, WITH UNIQUE RESTRICTED
DISTRIBUTION IN BOTH NEUROENDOCKINE AND NON-NEUROENDOCKINE TISSUES
AND CAPABLE OF CLEAVAGE AT THE RX(K/R)R CONSENSUS MOTIF.

CATALYTIC ACTIVITY: Release of mature proteins from their
proproteins by cleavage of Arg-Xaa-Yaa-RG-|-Zaa bonds, where Xaa
can be any amino acid and Yaa is Arg or Lys.

COFACTOR: PACE4A-IS PROBABLY CALCIUM-DEPENDENT.

SUBUNIT: THE PACE4A-I PRECURSOR PROTEIN SEEMS TO EXIST IN THE
RETICULUM ENDOPLASMIC AS BOTH A MONOMER AND A DIMER-SIZED COMPLEX
WHEREAS MATURE PACE4A-I EXISTS ONLY AS A MONOMER, SUGGESTING THAT
PROPEPTIOE CLEAVAGE AFFECTS ITS TERTIARY OR QUATERNARY STRUCTURE.

SUBCELLULAR LOCATION: PACE4A-I AND PACE4G-AII ARE SECRETED. PACE4G
AND PACE4GS ARE NOT SECRETED AND REMAIN PROBABLY IN ZYMOGEN FORM
IN ENDOPLASMIC RETICULUM. PACE4E-I AND PACE4E-II ARE RETAINED
INTRACELLULARLY PROBABLY THROUGH A MYDROPHOBIC CLUSTER IN THEIR C-
TERBUTURE DATEAR MYCHO BASEAUTH A MYDROPHOBIC CLUSTER IN THEIR C-

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       MEDLINE=98408849;
CEREBELLUM.

COMAIN: THE PROPERTIDE DOMAIN ACTS AS AN INTRAMOLECULAR CHAPERONE ASSISTING THE FOLDING OF THE ZYMOGEN WITHIN THE ENDOPLASMIC RETICULUM. ISOFORM PACE4D LACKS THE PROPERTIDE DOMAIN.

SIMILARITY: Belongs to peptidase family S8.
                                                                                                                                                                                               ISOId=P29122-8; Sequence=VSP_005436, VSP_005437;
TISSUE SPECIFICITY: EACH PACE4 ISOFORM EXHIBITS A UNIQUE
RESTRICTED DISTRIBUTION. PACE4A-I IS EXPRESSED IN HEART, BRAIN,
PLACENTA, LUNG, SKELETAL MUSCLE, KIDNEY, PANCREAS, BUT AT
COMPARATIVELY HIGHER LEVELS IN THE LIVER. PACE4A-II IS AT LEAST
EXPRESSED IN PLACENTA, PACE4B WAS ONLY FOUND IN THE EMBRYONIC
KIDNEY CELL LINE FROM WHICH IT WAS ISOLATED. PACE4C AND PACE4D A

```
TISSUE SPECIFICITY: EXPRESSED IN THE INTESTINE, BRAIN, ADRENAL GLAND, ANTERIOR PITUITARY, THYROID, OVARIES, TESTIS AND LUNG. HIGHEST LEVELS ARE FOUND IN THE GUT, OVARIES, TESTIS AND LUNG. EXPRESSION IS HIGHER IN FEMALE THAN IN MALE REPRODUCTIVE ORGANS. DEVELOPMENTAL STAGE: FIRST DETECTED AT E9 IN HIGHLY RESTRICTED RECIONS OF THE NEURAL TUBE, IN CAUDAL MYOTOMES, AND AT THE MATERNO-EMBRYONIC JUNCTION OF THE UTERUS. AT E10, RESTRICTED EXPRESSION IS DETECTED IN THE OPTIC AND OTIC VESTICLES, THE ROOF CENTRESSION IN THE DEVELOPING NERVOUS SYSTEM HAS EXPANDED TO EXPRESSION IN THE DEVELOPING NERVOUS SYSTEM HAS EXPANDED TO EXPRESSION IN THE DEVELOPING NERVOUS SYSTEM HAS EXPANDED TO
                                        MULTIPLE REGIONS INCLUDING HIPPOCAMPUS, THALAMUS, HYPOTHALAMUS, BRAIN STEM, AND SPINAL CORD. EXPRESSION IS ALSO DETECTED IN SEVERAL PERIPHERAL ORGAN SYSTEMS, INCLUDING GUT, LUNG, ADRENAL
KYDNEY PRIMORDIA.
